

## DirectConnect Gateway™

Iatric Systems DirectConnect Gateway™ is a single, standard Windows-based platform that meets all the requirements of Meaningful Use Direct Secure Messaging, while also adhering to the Direct Project standards.

With DirectConnect Gateway you can easily secure the contents of direct inbound and outbound messages you send over the public Internet to providers and patients.

Iatric Systems has made it easy to achieve direct secure communications:

- Conduct Direct Secure Messaging automatically from within many Iatric Systems solutions
- Eliminate system limitations using a gateway that works with any HIS or other system and is fully vendor agnostic
- Communicate safely with trusted recipients outside of your network
- Secure the sharing of health information with "Direct-enabled" HIEs
- Protect your hospital by maintaining a full audit trail of its secure communications

The Direct Project is a standard for the secure transport of healthcare messages, data, and documents exchanged over the public Internet between hospitals, physicians, patients, and other trusted providers.

### **DirectConnect Gateway lets you send Direct Secure Messaging two ways**

Iatric Systems DirectConnect Gateway is a simple, secure, scalable, and standards-based solution that meets all Direct Project standards and requirements.

The DirectConnect Gateway application can be...

1. Used from within Iatric Systems products
2. Integrated with other vendor HIS and EMR systems

### **Process inbound secure messages automatically**

DirectConnect Gateway polls multiple direct addresses for inbound messages and automatically retrieves those messages, processes them according to rules, then notifies users when they have a document for viewing.

### **Process outbound secure messages manually or automatically**

DirectConnect Gateway looks for outbound messages from all systems and applications, then routes them securely to the appropriate recipient. Outbound messages can be handled manually or automatically, based on established trigger events such as an inpatient discharge, emergency department visit, etc.

### **Key Advantages Include:**

- Is integrated with these Iatric Systems solutions:
  - Clinical Document Exchange (CDE)
  - MDAcess Physician Portal
  - PtAccess® Patient Portal
  - EasyConnect Jaguar Interface Engine
  - Physician Office Integration (POI)
- Enables Direct Secure Messaging with any vendor HIS or EMR system
- Connects with any Health Information Exchange (HIE) or Health Information Systems Provider (HISP)
- Includes a Directory for storing all valid Direct Secure Messaging addresses, ensuring secure and accurate message routing and delivery
- Integrates with iAlert 24/7 monitoring to ensure timely resolution to system or network problems
- Supports multiple messaging formats: ADT notices, CCD, PDF, diagnostic images, scanned documents, photographs, and more
- Comes from a source with a proven 23-year track record of integrating data between disparate systems
