

## Migration Products and Services

One Executive Director of Information Services said this about Iatric Systems migration support:

*"Iatric Systems has extensive HL7 interface experience, and we have been able to use their integration team as if they were remote staff. They understood our migration needs and worked with us to deliver a better product at a lower cost than if we had tried to hire internally."*

Replacing your hospital's EHR with another system is a complex process. It requires maintaining historical patient data and integrating your other information systems such as your EDIS, OR, PACS, LIS, and others.

You don't want the migration or the end result to interfere with the quality of patient care, so you want to complete this transition quickly and professionally.

Iatric Systems has extensive expertise helping hospitals achieve a smooth migration to a new EHR. Our experience integrating hundreds of disparate systems helps you leverage many of your existing systems and applications and achieve a fast and successful result.

## **Ensure a Successful Migration with Iatric Systems Migration Products and Services**

Migrating to a new EHR vendor presents many challenges: handling format file changes, vocabulary mapping, patient identity updates, connectivity and viewing, and archiving old data.

Rely on Iatric Systems to help with every aspect of your migration, including storing and archiving your historical data, cleaning up your patient matching data, migrating data to your new system, interfacing disparate systems, as well as providing project management services.

## **Iatric Systems is your most trusted migration resource.**

Working with a partner that has helped support this process for a wide range of hospitals can significantly lessen your burden. Putting the Iatric Systems team on your team can:

- Reduce your risk of interrupting operations during the process
- Implement your new EHR faster
- Avoid costly surprises
- Ensure that caregivers have quick and easy access to patients' historical medical data
- Ensure that you are moving accurate data

## **Iatric Systems solutions can be adapted to work with all major EHR systems.**

These Iatric Systems solutions work with any EHR system. If you are currently using any of these solutions, you can continue to enjoy the same benefits with your new EHR, once the data migration is complete.

- Security Audit Manager™
- Analytics on Demand™
- PtAccess®
- Accelero Connect®
- IatriStore™
  - Clinical Archive Database
  - IatriStore Clinical Viewer
- EasyConnect Jaguar™
- Report Writing Services
- CareContinuity™

## **Key Advantages Include:**

- Maintain a comprehensive record of clinical data
- Easily feed in data from multiple formats such as HL7, flat file, CCD, etc., for maximum flexibility
- Ensure accurate storing of information with comprehensive archiving
- Lessen the burden on your IT team by tapping our Project Management and/or Analyst Support Services to manage the project details to completion
- Maintain patient context across systems by linking data to other information systems and view archival data from your new EHR
