

Intelligent Medical Objects (IMO) Implementation Services

Attesting to Meaningful Use requires that your hospital install IMO mapping to ensure the accuracy of shared patient clinical data. This mapping must be in place for 2014-2015 and Meaningful Use Stage 2 and CQM requirements. Traditionally, this process takes at least six months to implement.

This long time period for implementation can add a significant burden to your already limited internal resources. The Iatric Systems Professional Services team can not only lighten that load, but also complete this complex IMO implementation in as little as two months.

Rely on Iatric Systems to help you complete your mapping and implementation or manage the entire IMO project for you.

Intelligent Medical Objects Implementation Services

Cut down the time it takes for you to implement IMO with help from Professional Services.

Your hospital cannot attest with the most accurate data unless you have IMO mapping installed. Standardization is a key requirement for CQM reporting, CCD exchange, and public health interfaces.

Iatric Systems Professional Services can manage your IMO implementation projects and work closely with your IMO Project Managers and EHR vendor. Customers who utilize our expertise are able to cut the IMO mapping timeline in half, as compared to those who map IMO data on their own.

We've already learned how to avoid the glitches that waste time and money. You'll experience the following efficient and streamlined process:

- An Iatric Systems consultant works with you to verify the correctness and recency of terms in your EHR dictionaries.
- You and our consultant pull the queries for MU/CQM for IMO to extract.
- Your consultant runs your hospital's NPR reports and uploads them to IMO.
- After IMO completes a QA process (2-4 weeks), the files are returned to the Iatric Systems Professional Services consultant and the lengthy reconciliation process begins.
- 5. IMO mapping process is tracked for you to ensure accuracy. Many hospitals have spent months on implementation, only to find that mapping had not been done correctly and IMO codes did not translate like they should. When Problem Lists and all MU data are not accurate, it can threaten receipt of Meaningful Use incentive monies.
- Your Iatric Systems consultant can communicate regularly with IMO Project Managers to expedite the QA process and reconcile files quickly.
- 7. Your Iatric Systems consultant also works with the EHR coordinator through the process to ensure IMO codes are installed and functioning properly. This ensures the quality use of IMO terms and a smooth implementation to get your team up and running in no time at all.

Iatric Systems will complete the project with accuracy and efficiency.

Key Advantages:

- Successful IMO mapping without the need to train staff or pay overtime
- Confidence in meeting MU Stage 2 deadlines with customized implementation checklists and timelines
- Faster implementation of MU Stage 2 with experts who have perfected the process and can reconcile terms efficiently
- Help facilitate the receipt of Meaningful Use incentives and avoid costly mapping errors
