

CMS Mock Audit Services

Healthcare IT News reports that "At least 5 percent of organizations attesting for Meaningful Use will undergo a CMS audit, with half of those subject to a pre-payment audit."

If you have a vision of losing days and weeks of valuable IT time and the concern of losing Meaningful Use incentive monies, our Professional Services team can help reduce the stress associated with Meaningful Use audits. With Mock Audit services, we'll run every part of your systems and data through the auditing process to confirm that your hospital is ready to be audited.

An Iatric Systems Mock Audit can help you make sure your systems and records are ready so you can reduce the cost, the effort, and the worry associated with a CMS audit.

Be confidently prepared for a CMS audit.

Originally, CMS had planned to audit a very small, random selection of hospitals attesting for Meaningful Use. **New guidelines now call for one out of every ten hospitals to be audited**, and the audits can take place up to six years after attestation.

There's no reason to be caught off guard. Iatric Systems Mock Audit Services can identify and assess potential deficiencies in your Meaningful Use Attestation Documentation by simulating a CMS Meaningful Use audit.

Mock Audit Process

- Initial assessment which includes a one-to-two-day on-site visit to meet your team, interview your staff, and collect documentation
- Review of your overall method and approach for preparing documentation of Meaningful Use compliance
- Interviews with your key Meaningful Use stakeholders
- Analysis of the current state of your data and systems in relation to Meaningful Use Objectives and Requirements
- A Score Card Report against Meaningful Use requirements and documentation of compliance for each objective

Proven Experience

The Iatric Systems Professional Services team will bring their deep experience of audit preparation to your hospital, to help you significantly reduce the time, the effort, and the worry associated with preparing for a CMS audit.

Key Advantages Include:

- IT staff remains focused on existing projects without the sudden burden of audit requirements
- Confidence your data and systems are ready to be audited with no additional effort on the part of your IT team
- Help facilitate the receipt of Meaningful Use incentive dollars
- Keep your important IT strategies on track while Iatric Systems checks the readiness of your data and systems for you
