Cloud Hosting for Patient Privacy Solutions

Iatric Systems gives healthcare organizations multiple options to run our healthcare applications. Whether you want to install our application at your facility, or would like to have it hosted in the cloud, Iatric Systems gives you the best of both worlds.

Cloud hosting can be a alternative deployment model for patient privacy monitoring. It lets you quickly scale up or down making cloud hosting a flexible and cost-effective choice.

Iatric Systems Cloud Hosting is a secure, reliable platform that meets Service Level Agreements (SLAs) for resource-intensive applications. By choosing Iatric Systems Cloud Hosting you can:

- Reduce capital costs and setup time by not having to invest in hardware, software, or pay licensing fees
- Increase productivity by eliminating often time-consuming installation and maintenance efforts

Cloud Hosting frees your internal resources to focus on other key initiatives within the hospital.

Iatric Systems Cloud Hosting keeps your applications secure and compliant at every level.

Iatric Systems Cloud Hosting adheres to key security best practices — authentication, access control, privacy, confidentiality, and compliance. You get easy access to the controls to implement these practices so you can be sure policies are enforced.

Protect Health Information in the cloud.

Any handling of Patient Health Information is affected by HIPAA and HITECH regulations. Our hosting service has been audited by an independent Certified Public Accounting firm that specializes in cloud provider assurance and compliance. They have issued an attestation report stating that our hosting service security program meets the applicable HIPAA security and HITECH breach notification requirements.

Maximize application availability and business continuity.

Iatric Systems Cloud Hosting uptime is guaranteed to meet a 99.9 Service Level Agreement. Business continuity and disaster recovery capabilities are available as an added benefit.

With our hosted solutions you'll receive disaster recovery capabilities at a significantly lower cost than traditional on-premise disaster recovery solutions. Replication to a disaster recovery site is available as an additional option.

Key Advantages Include:

- Secure, robust, and scalable x86-based infrastructure
- Production-ready environment capable of running the most demanding workloads
- Highly available architecture for migrating live workloads and/or automatically restarting in the event of unexpected failure
- Conforms to key standards, including PCI 2.0, SAS 70, and ISO/IEC 27001
- Exceptional levels of resource isolation, ensuring that deployed applications are unable to be accessed by unauthorized users
- Meets applicable HIPAA security and HITECH breach notification requirements
- Guaranteed SLA of 99.9 uptime
- Encryption at rest and over the network
- Built-in edge and vNIC-level firewall, NAT, SSL VPN
