

Managed Services for Partner Risk Manager™

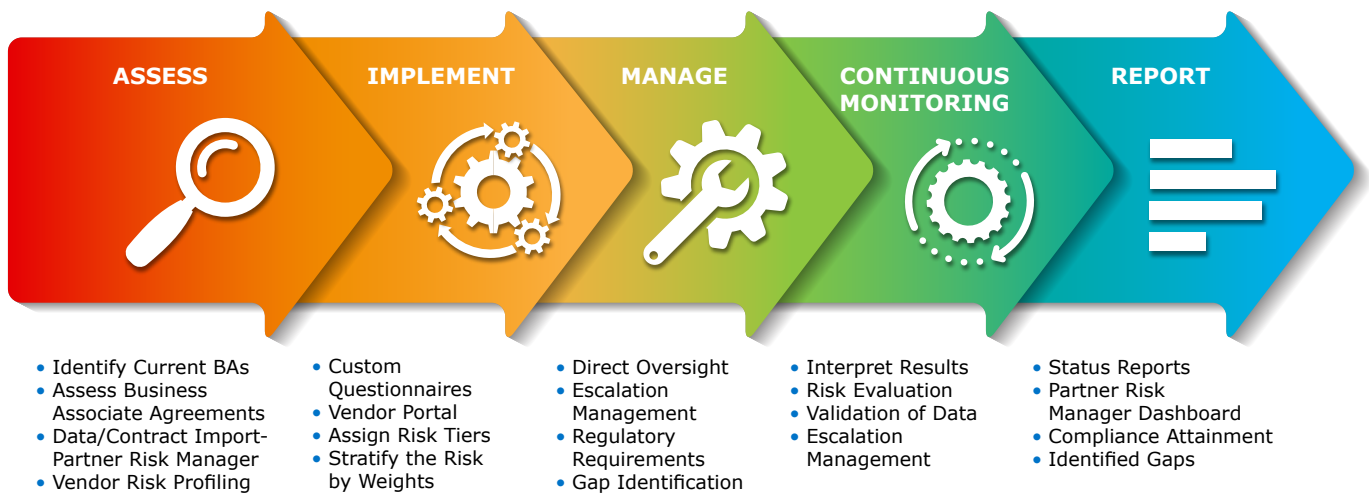

Protect privacy and security by ensuring due diligence with your third-party vendors.

A great deal of your hospital's patient information is now handled by outside partners — physician practices, outside labs, insurance companies, and many others. In an ideal world, you could trust these business associates (BAs) and their subcontractors to always take the necessary precautions to keep sensitive information safe.

Third-party vendors at times can be the weakest link in your security efforts, and their vulnerabilities can lead to healthcare organizations being compromised.

In addition, with the increased sharing of digital data, OCR now recognizes that every partner to whom you grant network access represents potential breach of patient privacy.

Iatric Systems, the KLAS category leader in patient privacy monitoring, has expanded its portfolio to deliver a comprehensive product and services solution — Partner Risk Manager™ combined with a team of third-party risk experts — to manage the process.

Managed Services for Partner Risk Manager™ is a critical component of your overall vendor program. Partner Risk Manager will automate the assignment of risk through vendor questionnaires, create risk tiers for easy classification, and prepare your hospital for a possible OCR audit with complete reporting to document BA oversight. Technology can only take your program so far, and our professional services add value by providing a process that provides a meaningful return on investment while better managing vendor risk.

Delivery Methods

Iatric Systems will work with you to assess your current vendor risk posture and help you pick the approach that makes most sense for you.

Key Advantages Include:

- Eliminate the need for additional FTE resources and internal knowledge of vendor risk management
- Rely on our experts who have years of experience in privacy and security
- Let our team uncover gaps and vendors that need attention
- Allow our experts to identify current BAs, ensure that contracts are up to date and document a valid process
- Manage and import the contract information
- Ease the burden of contacting vendors to complete the questionnaires
- Provide monthly status reports to Executive Leadership & Compliance Team
- Coordinate monthly site calls as necessary to discuss compliance attainment

Managing business associates is complex, and involves multiple stakeholders across the entire organization. Partner Risk Manager combined with managed services, streamlines the process, which increases production, and frees your valuable resources while better managing vendor risk.
