

Manage Vendor Risk with Partner Risk Manager

To further protect patient privacy, ensure trust, and maintain regulatory compliance, Iatric Systems has expanded its patient privacy portfolio with Partner Risk Manager™. This web-based application manages the workflow necessary for organizations to ensure due diligence with their third-party relationships. By monitoring the risk of all agreements and providing alerts when agreements need updating, Partner Risk Manager helps organizations protect patient privacy and build trust. Partner Risk Manager...

- Creates workflow driven logic for vendor risk management
- Manages third-party risk through automated vendor assignment of risk levels
- Increases productivity through automated workflow logic

Reduce Risk with Workflow Driven Logic for Vendor Risk Management

The Health Insurance Portability and Accountability Act Omnibus Final Rule made substantial changes to the obligations and liabilities of business associates and their subcontractors. Failure to conduct an adequate assessment and assure you can monitor Business Associates (BA) puts your healthcare organization at risk of a breach — and ultimately a charge of willful neglect.

Iatric Systems has expanded our family of patient privacy solutions with the addition of our Partner Risk Manager. This web-based solution increases productivity through automated workflow logic to determine the specific questionnaires and attributes for vendor risk management. This product is available as a stand-alone product or can be coupled with Security Audit Manager.™

Product Capabilities Include:

- Monitor the risk of third-party vendors and agreements, understand those that need to be updated
- Keep you informed of the status of your third-party vendors through risk determination
- Accomplish screening, tracking and cross-department collaboration related to vendors and agreements
- Prepare for OCR audit with complete reporting to document BA oversight
- Simplify vendors' compliance tasks to build better partnerships and a culture of compliance
- Customized pre-contract questionnaires with automated workflow logic
- Customized to evaluate the use of PHI, volume and frequency of data, how data is stored, processed, transmitted, and destroyed and much more
- System alerts will be generated when a user associated with a terminated agreement accesses PHI (Requires Security Audit Manager)
