

Physician Office Integration-Inbound

For MEDITECH System Hospitals

Iatric Systems Physician Office Integration-Inbound lets physicians enter orders for any outpatient service right from their EMR. As those orders arrive, the advanced Work List quickly manages the orders to expedite the registration process and streamline workflow for faster turnaround times. This capability significantly improves customer service and physician satisfaction.

Iatric Systems Physician Office Integration-Inbound lets physicians enter orders for any outpatient service right from their EMR. As those orders arrive, the advanced Work List quickly manages the orders to expedite the registration process and streamline workflow for faster turnaround times. This capability significantly improves customer service and physician satisfaction.

It works smoothly with your MEDITECH system, while providing advanced logic to expedite your workflow. Here are the highlights:

- Accepts HL7 ORM orders from multiple EMRs using an engine approach, avoiding the need for costly additional point-to-point interfaces
- Checks to see if the patient already exists in your system and if not, can hold the order on the Work List or create a new patient record, depending on your preferences
- Creates any required pre-registration and registration types based on your business rules and workflow preferences
- Holds orders on the Work List until the patient arrives for his/her visit, or until site defined pre-visit activities are completed (e.g., scheduling, insurance verification). Or, orders can automatically trigger a registration.
- Routes order messages into MEDITECH OE or OM to then flow to the lab, radiology, etc., or sends them directly to lab and radiology if needed to meet your preferred data flow
- Allows entry of future and standing orders depending on EMR's capability
- Presents easy search and sort capabilities of orders by service, EMR source, physician, patient, etc.
- Offers optional advanced integration, such as: integrating with your medical necessity software; launching direct to registration from the worklist; inbound billing from EMR, demo recall to update ADT, and more.

Key Advantages Include:

- Improved physician satisfaction
- Competitive advantage over commercial labs
- Scalability
- Secure data transfer
- HIS order entry from EMR system (optional)
- Hospital staff workload reduced
- Elimination of need to call or fax in orders

Improve your hospital's efficiency, customer service, and physician satisfaction.
