ID Experts and Iatric Systems Offer Hospitals A Proactive Solution for Identifying and Managing Security Incidents

Integrating Iatric Systems Security Audit Manager™ and ID Experts' RADAR® Identifies, Automates, and Simplifies the Complexities of Data Incident Response Management

PORTLAND, Ore. and BOXFORD, Mass. — February 18, 2015 — Patient data moves through a hospital much the same way blood flows throughout the human body. However, patient data is measured in terabytes; is highly regulated; harder to protect because it resides in different applications and databases; and requires access by many caregivers and administrators. With terabytes of sensitive patient data in so many places, data security incidents happen in a heartbeat and can be hard to discover. Iatric Systems Inc., a comprehensive healthcare IT integration company, is integrating its Security Audit Manager™, a patient privacy monitoring and incident reporting solution, with ID Experts' [RADAR®](#), incident response management software, to offer hospitals a complete, best-in-class solution for identifying, assessing, and managing security incidents, and complying with federal and state data breach notification laws.

Together: A Diagnostic Engine for Incident Monitoring and Response Management

More than 900 healthcare organizations nationwide use Iatric Systems Security Audit Manager to monitor EHRs, audit patient records, and proactively detect security incidents. RADAR further expands the incidents from Security Audit Manager, performs a multi-factor incident risk assessment—electronic, paper or visual—and provides guidance on whether the incident is a data breach requiring compliance action for federal and state breach notification laws. RADAR enables security and privacy professionals to collaborate and analyze the outcome of their incidents to gain insights, identify trends, and determine what actions are required through an incident management dashboard, notification alerts, and incident assessment and remediation summaries and reports. Pairing Security Audit Manager with

RADAR helps healthcare organizations establish an efficient and compliant incident monitoring and management program.

“We wanted to provide an advanced risk assessment experience for customers who desire this level of functionality, and we partnered with ID Experts because RADAR delves deeper into possible breaches to uncover additional details,” said Frank Fortner, president of Iatric Systems. “In addition, the robust RADAR knowledge base accounts for the intricacies of federal, state, and local jurisdictions that may affect reporting requirements.”

“Organizations are looking at the scalability and consistency of their response processes, evaluating their organizational structure and staffing, and adopting automation tools to aid collaboration and streamline the complex processes of incident risk assessment, breach determination and documentation,” said Mahmood Sher-Jan, executive vice president and general manager, RADAR product unit at ID Experts. “With integrated best-of-breed software solutions that can bridge the gap between security incident detection and response, organizations can effectively manage and reduce risks from PHI incidents, while helping to ensure compliance with the changing breach laws.”

About ID Experts

ID Experts provides software and services to simplify the complexities of managing privacy and security incident response. Its award-winning RADAR® software is relied on by some of the largest healthcare, insurance, and financial services organizations to reduce risks and ensure compliance. For more than a decade, ID Experts has provided data breach services and managed thousands of incidents. ID Experts is an advocate for privacy and participates with the Consumer Federation of America, the PHI Protection Network and Patient Privacy Rights. Visit www.idexpertscorp.com.

About Iatric Systems

Healthcare is a complex and highly regulated industry with data spread across multiple systems and technologies, meaning decisions are made every day without complete information readily available. Iatric Systems is a healthcare technology company dedicated to leveraging our integration expertise to provide healthcare organizations with products and services that bring the right data to the right people at the right time. In our 25-year

history, we have delivered more than 25,000 interfaces and integration solutions to more than 1,300 healthcare organizations. This integration experience helps healthcare organizations make more informed decisions critical to improving patients' health and organizations' fiscal stability.
