

Visual Flowsheet™

Visual Flowsheet™ is the smart choice for patient care assessment, documentation, trending, and medication management that integrates seamlessly with MEDITECH.

Help caregivers make clinical decisions and patient assessments fast:

- Present clinical decision support data on one entire screen for evaluation and care planning
- Minimize the number of keystrokes required to access and document patient care
- Simplify real-time chart review to comply with auditing requirements, quality management, utilization review, core measures, and more
- Provides targeted Quality initiative indicators, i.e. Sepsis, in a single screen for audits and real-time monitoring

Visual Flowsheet™ facilitates highly efficient online assessment and documentation of patient care. Developed with clinicians to ensure widespread clinical use, Visual Flowsheet seamlessly integrates with MEDITECH without the use of EMR IDs and is the perfect solution when your hospital implements online flowsheets and eMARs.

Visual Flowsheet displays MEDITECH data from various clinical applications in a windows-based clinical flowsheet view that nurses and physicians love. Customizable views for any/all MEDITECH users clearly present pertinent decision support data so that caregivers can point, click, assess, and treat.

Visual Flowsheet is a positive results proven solution in use throughout the United States and Canada.

Capabilities and Advantages

- Streamlines workflow by telling the patient's story on an entire single screen, including eMARs
- Presents a larger, clearer view of pertinent patient data with fewer keystrokes
- Graphical format enables faster, more accurate clinical assessments and decisions
- Performs well in all parts of the hospital, for any MEDITECH user's workflow
- Can be used as an SBAR or handoff tool between caregivers or providers
- Easy navigation to switch patient with minimal keystrokes
- Provides clinical alerts based on customer-defined criteria
- Notification of unacknowledged orders, pain reassessments, and overdue item reminders
- Displays EDM and ORM data and options to link to PACS
- Ease of navigation to other MEDITECH modules, routines, and web-based resources
- Effortless right-click options for entering documentation and updating interventions status (Magic)
- RXM medication detail display (Magic)
- IV titrations and IV spreadsheet can be viewed with other clinical data (C/S and 6x)
- Monitoring and auditing of Core Measures such as Sepsis
- Compiles all relevant data onto one intuitive screen to allow comprehensive chart review
- Assists in meeting hospital goals and initiatives
- Provides the ability to display, report, and print a tab or format
- Provides easy-to-use graphing/trending

Visual Medication Administration Record™ is an efficient medication assessment and administration documentation tool.

Visual Medication Administration Record displays your MAR online exactly the way you want to see it, providing a complete overview of a patient's medications at a glance. Users can also document medication administration from this screen.

Visual Medication Administration Record was developed using input we received from your peers — nurses and pharmacists at hospitals that operate the MEDITECH HIS. Visual Medication Administration Record is an efficient medication assessment and administration documentation tool, all in one.

Visual Medication Administration Record is included in the purchase of Visual Flowsheet.

Key Advantages Include:

Complete medication profile at a glance

- Quickly view next scheduled medications
- Alert provided when there is an un-documented STAT medication

- Display Titration documentation in a clear, easy-to-view screen
- Easily identify overdue medications, dose changes, linked medications, withheld reasons, and pertinent queries associated with each medication

Streamlined medication administration documentation

- Document multiple medications at once
- Monitor and document medication reassessments
- Easily view PHA and NUR queries, and LAB test view groups
- Review medication details, LAB, and Microbiology results prior to documentation

Flexibility

- Define color-coding to fit your hospital's specific needs
- Toggle easily between trade and generic name
- Medication sorting options — Schedule, Next Admin, Acknowledgment Status, Name, and more
