Paperless Pharmacy can eliminate many of the challenges associated with your hospital’s medication orders.
Online medication order management

Are you looking to streamline your pharmacy workflow? Do faxed medications often get lost as a result of equipment malfunction or human error? Our Paperless Pharmacy can eliminate many of the challenges associated with your hospital’s medication orders.

Orders are scanned into MEDITECH, not sent to a fax machine, and are instantly accessible online to users with the proper access. Orders with no associated scanned order are clearly indicated. This gives your pharmacy an effective method of verifying receipt of orders and eliminates many problems that can cause missed meds.

We also streamline pharmacy staff’s workflow. On one screen, users can see all of the orders that currently need to be filled, each order’s status (stat, in process, on hold, complete, and so on), the individual assigned to work on each order, as well as comments about the orders. Hospitals can choose what information fields appear on the screen and can sort on any column. For example, staff could sort by priority so all stat orders appear at the top. Paperless Pharmacy is an online worklist that conforms to your pharmacy’s workflow.

Key Advantages Include:

- Eliminates missing meds caused by faulty faxing
- Improves patient safety with barcode patient ID verification
- Streamlines pharmacy staff workflow
- Helps ensure orders are filled in a timely manner
- Increases legibility of orders by scanning rather than faxing
- Increases accountability and tracking by adding user dates and time stamps on all transactions
