

Hocus Pocus!

The New "Magic" Behind FOCUS

Frank Fortner / David Reed – latric Systems, Inc.

Objectives

Acquire a basic understanding of MEDITECH's newest proprietary technology platform called FOCUS.

Contrast the basic differences between FOCUS and previous technologies and become better equipped to understand the benefits and challenges of a future migration to FOCUS.

Defining NPR...

- "Pre-FOCUS" Client/Server technology
- Includes ALL 5.x versions (5.0 5.6)
- Is a *technology*, not a report writer!

TECHNOLOGY

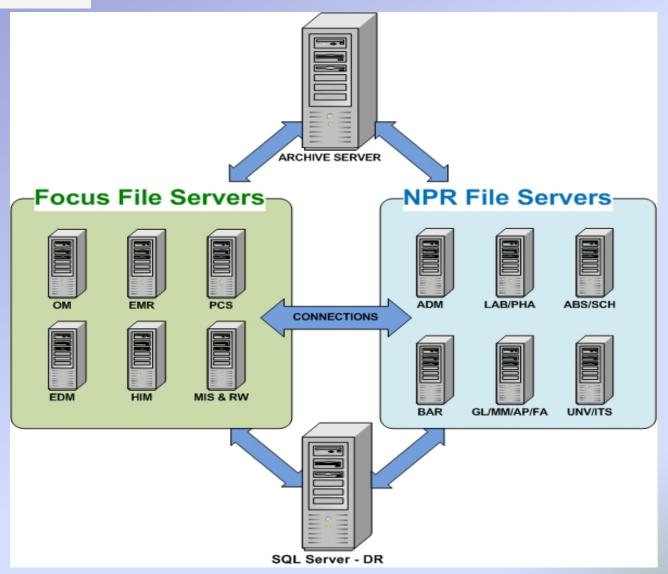

What Is Client/Server 6.0?

- Hybrid of NPR and new FOCUS Applications
- In 6.0 Adv. Clinicals are written in FOCUS (EMR, PCS, ED, OM - along with HIM and MIS)
- Everything else in 6.0 (for now) is NPR
- Communication between FOCUS and NPR
- Very Similar UI across FOCUS and NPR

What Is Client/Server 6.0?

What is FOCUS?

- Development environment built for FS
- FOCUS is to FS what NPR Magic was to \$T Magic
- "Chronological" Database Technology
- Optimized Network Management
- Updated Interface Tools for Screens / Reports

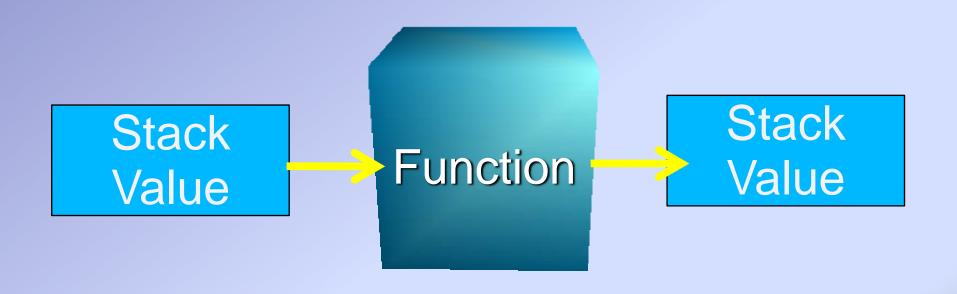

- FS = new(er) programming language
- Stands for "Functional System"
- Interpreted language with lots of function calls
- Emphasis on client-side processing
- Very little support of Data Defs & Variables

Functional Programming

CODE COMPARISON

Hello World Code in Magic

```
:Code Main ← Name of Function

200,300'@Iw@OW, ← Create a window

"My First App"@Ih ← Add a title to the window

"Hello World!!"@Wb, ← Output string in the foreground

DO{@RK~=27}@CW; Exit when user presses 'ESC'
Close the Window
```

#Translation

:Options

Result MSFile

:Product

Type Unstructured

#Preamble

:Options

Type Process

#Magic

:Code Main
`200,300'@Iw@OW,
"My First App"@Ih
"Hello World!!"@Wb,
DO{@RK~=27}@CW;

#Translation

:Options

Result MSFile

:Product

Type Unstructured

#Preamble

:Options

Type Process

#Magic

:Code Main

~200,300'@Iw@OW,

"My First App"@Ih

"Hello World!!"@Wb

 $DO\{@RK~=27\}@CW;$

Same as FS code in the Main body

#Translation :Options Used to determine "run-time" behavior Result **MSFile** :Product Type Unstructured #Preamble :Options Type **Process** #Magic

:Code Main
`200,300'@Iw@OW,
"My First App"@Ih
"Hello World!!"@Wb,
DO{@RK~=27}@CW;

#Translation

:Options

Result MSFile

:Product

Type Unstructured

#Preamble

:Options

Type

Process

Defines the Object type i.e. how this object will be "called"

#Magic

:Code Main
`200,300'@Iw@OW,
"My First App"@Ih
"Hello World!!"@Wb,
DO{@RK~=27}@CW;

USER INTERFACE

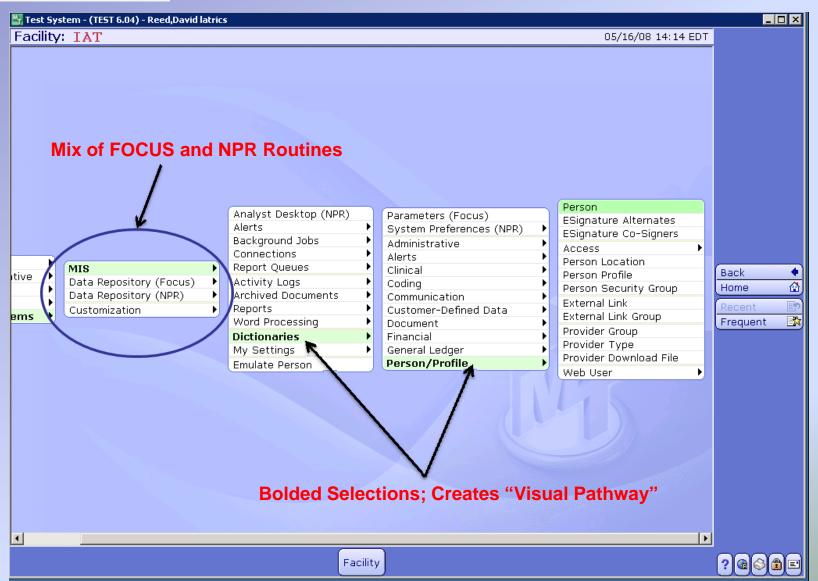

New Screen Technology

- Menu Navigation
- Desktop Screen Regions
- Data Entry Screens
- FOCUS vs. NPR
- Lookups
- History / Audit Trail

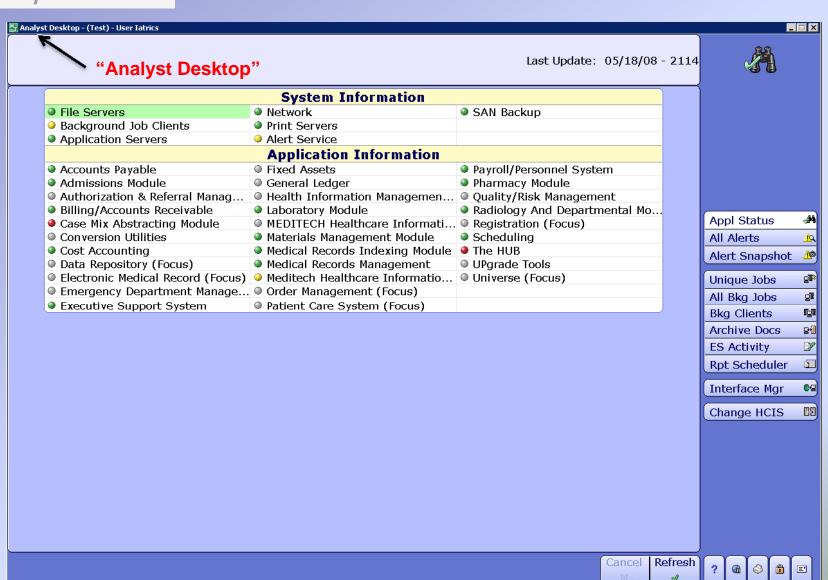

Menu Navigation

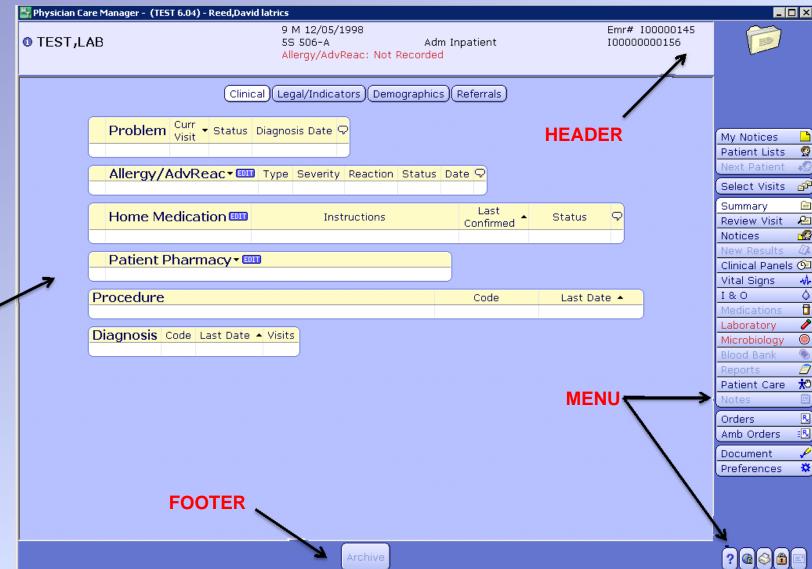

Role-Based Desktop

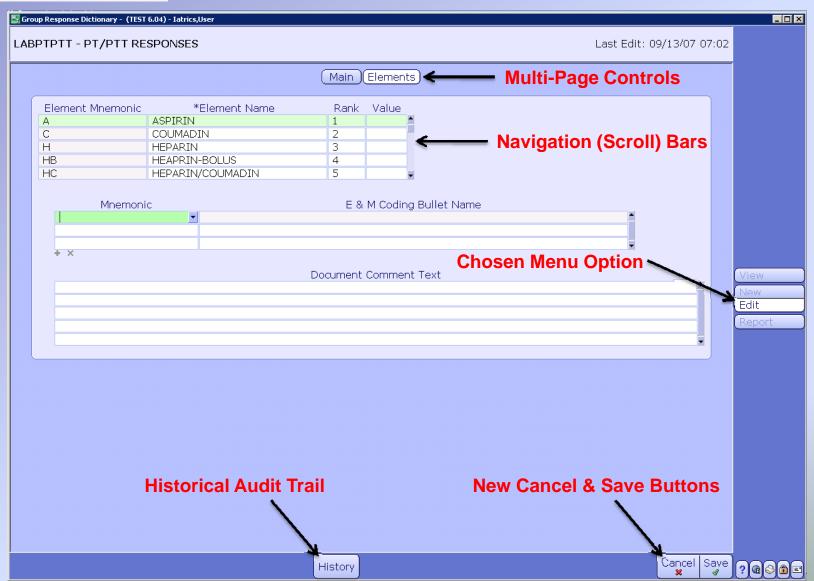

BODY

Desktop Screen Regions

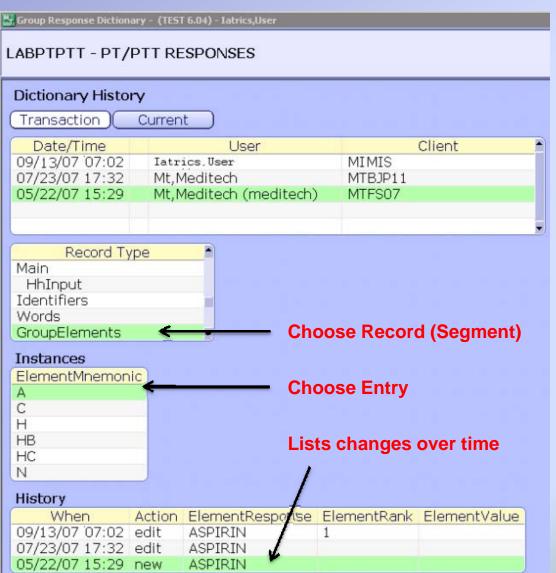

Data Entry Screens

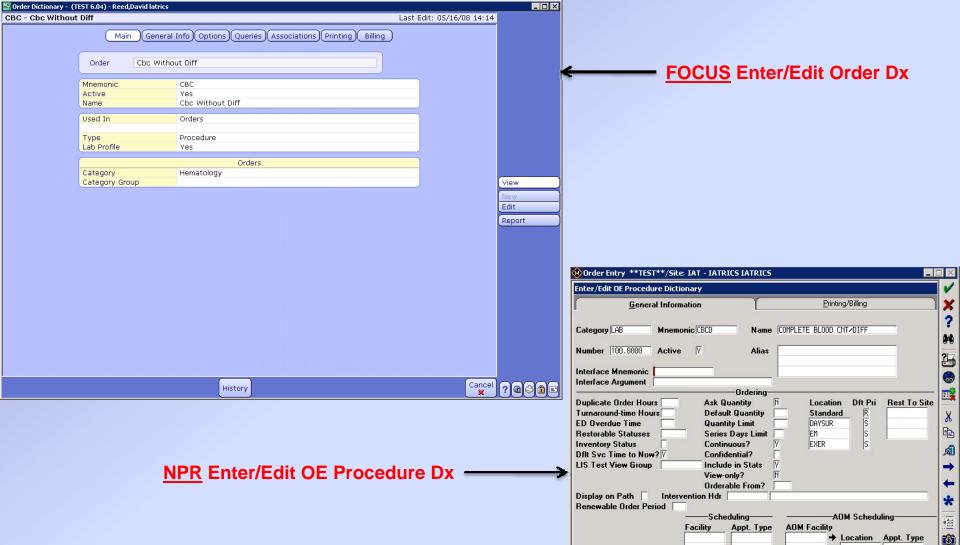

History

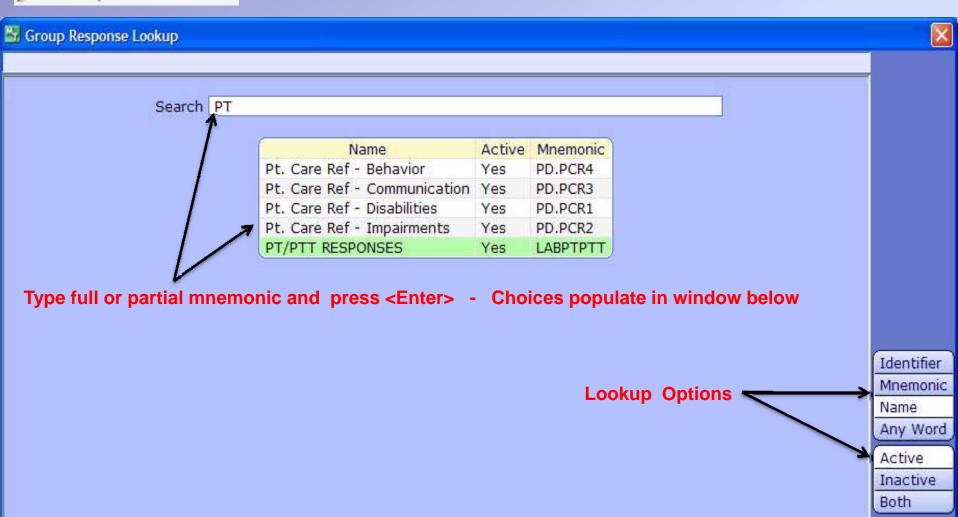

FOCUS vs. NPR

4

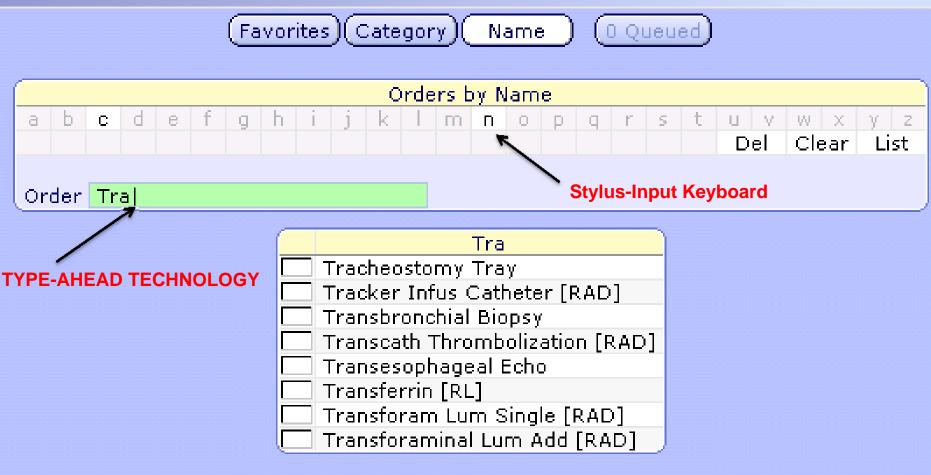

Lookups

Lookups

HARDWARE

Hardware

Typical Configuration

6 NPR and 3 Focus File Servers

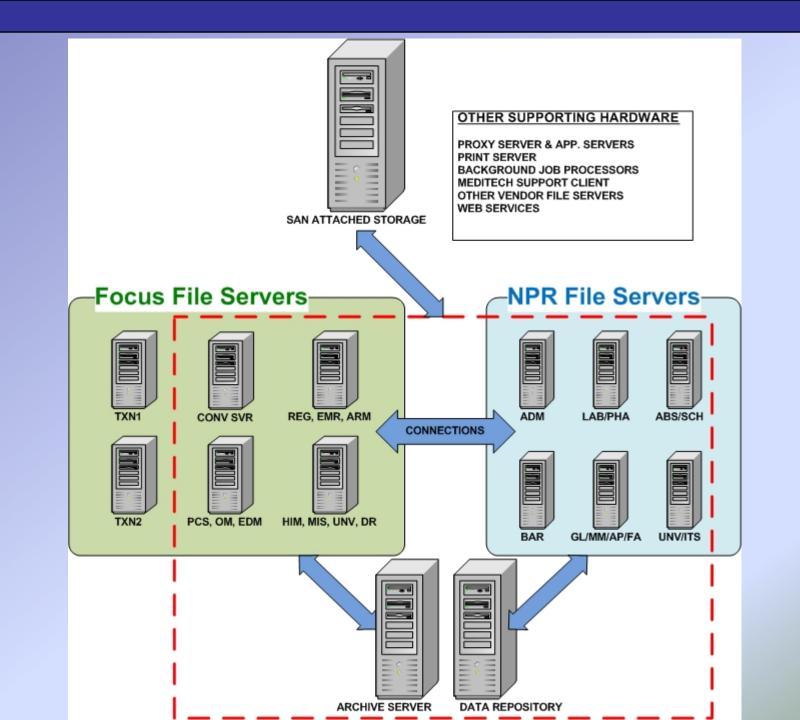

SAN attached storage

2 Transaction Servers

11 Background Job Processors

Other needed machines

Cost vs. Under Configuring?

Network Design

- Careful application design allows correctlygrained network usage
- Network protocols allow efficient transfers
- Minimized effect of high latency or slow bandwidth
- Small runtime footprints

System Architecture

Transaction Server

- Controls all database writes
- Protects database from client/user failure
- Backups are transactionally aware across servers
- Roll-forward a database from a prior backup

System Architecture

Conversion Server

- Limit Downtime
- Allow for database file conversions to be performed offline
- Transactions can be rolled in and also converted offline

FOCUS Database

Chronological Database

- Append Only
- Reliable
- Natural complete historical audit

Application Design Tools

Abstraction — Application tools enforce abstraction

- Screen Design can allow for web-based display and data entry
- Database file distribution design allows for scalability
- User Interface enforces consistency
- Modern look and feel

IMPROVEMENTS

Improvements

- Built-in audit trails of everything
- Improved network performance
- Reduced downtime; increased reliability
- Data corruption virtually eliminated
- Modern screen technology & workflow

Improvements

- Easier for MEDITECH to support
- A LOT less "locking" issues in FOCUS
- The concept of multiple databases is gone

REPORT WRITER

- Good News!! There is a Report Writer!!
- Terminology has changed a little...
 - <u>DPMs</u> are now called <u>Objects</u>
 - Segments are now called Records
 - Data elements are now called <u>Fields</u>
- No fragments, macros or current ability to use FS code inside computed fields

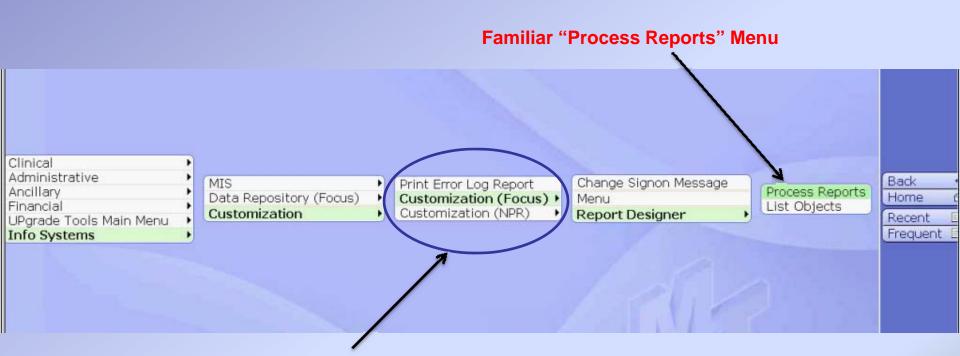

- Rule Editor / Wizard may eliminate need for code
- No abbreviations (e.g GE, LE, EQ)
- All FOCUS application data is available with no special "tricks" needed
- No current plan to allow FOCUS to get NPR data
- Output is via "Frames" one per region

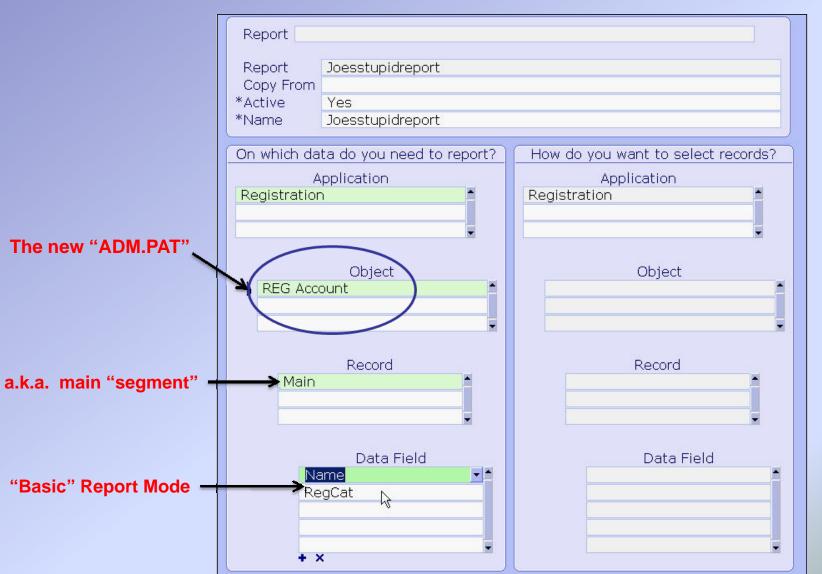

SNEAK PREVIEW... shhh!

Two Report Writer Options

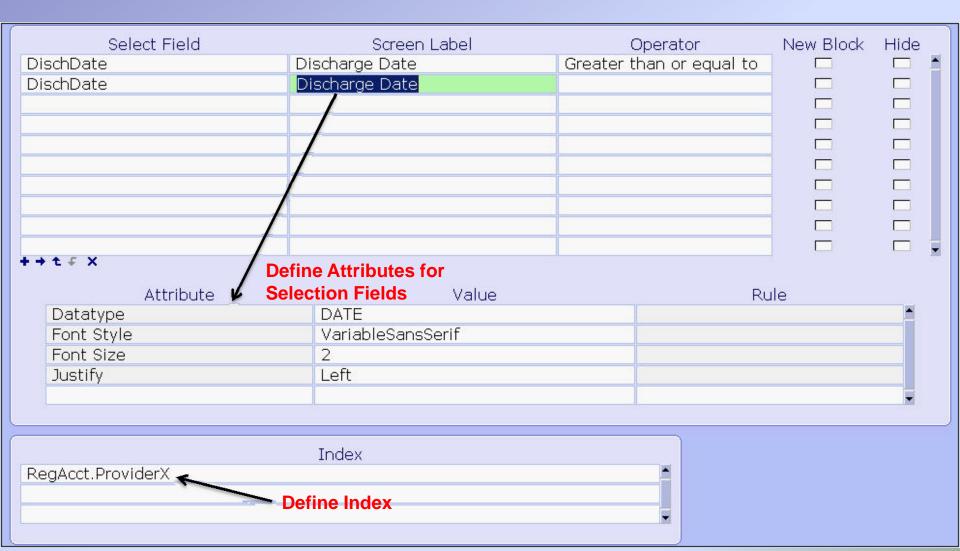

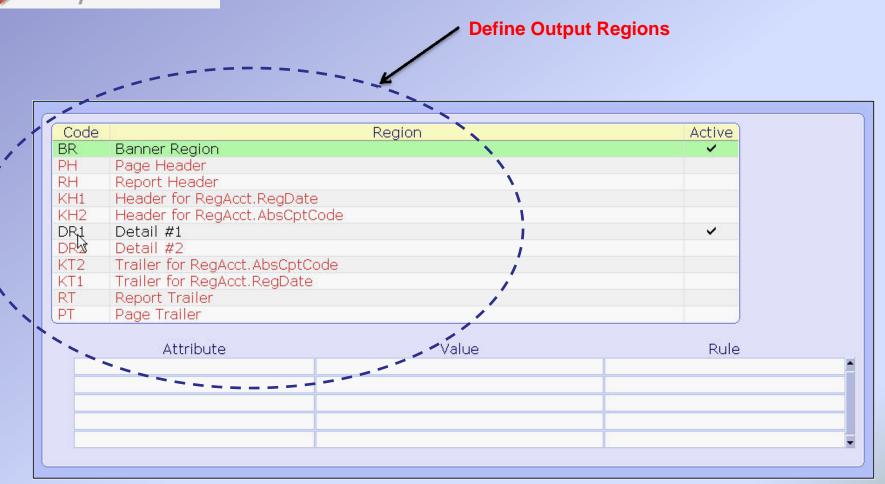

*Title Line 1 Doesstupidreport Title Line 2 Title Line 3				
RegAcct.Main	Portrait Variable sans Serif 2 Yes Yes HCIS Yes *Detail Record Main Record (aka	Paper Width (Incher Paper Height (Incher Top Margin (Incher Bottom Margin (Incher Margin (Incher Per Incher Per Page	thes) 11 es) 0.5 nches) 0.5 es) 0.5	
Attribute	Value		Rule	

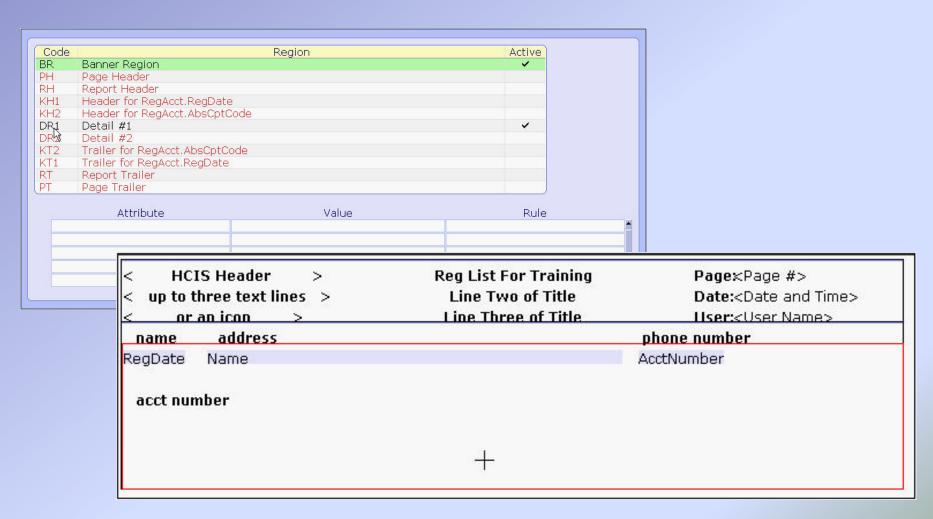

THE FUTURE

Rumors, Future Possibilities...

- Phased approach for 6.x / FOCUS
- Scripting in 6.0 / FOCUS?
- Alternate Hardware Configurations?
- Greater use of web technologies?
- Habla espanol?

THANK YOU!!!!
