# iatricSystems™

SmartBoard Vision™

SmartBoard Vision (SBV) improves patient care, clinical quality measures, and fiscal management for all the areas in the hospital. It presents a customized view of multiple patients' key data, from various sources, on a single screen — all in real-time.

Users can easily track patient information, including everything from early-stage infection to labor and delivery. Clinicians can quickly see key information to provide quality patient care and streamline their workflow.

SmartBoard Vision™

iatricSystems™

SmartBoard Vision (SBV) improves patient care, clinical quality measures, and fiscal management for all the areas in the hospital. It presents a customized view of multiple patients' key data, from various sources, on a single screen — all in real-time.

Users can easily track patient information, including everything from early-stage infection to labor and delivery. Clinicians can quickly see key information to provide quality patient care and streamline their workflow.

SmartBoard Vision offers a wide array of uses, including:

- Quality measures compliance tracking
- Infection control
- Monitoring lab results and patient medications
- Scheduling for pre-registration and registration
- Influenza/COVID management

Smartboard Vision also gives the capability to track multiple statuses, including:

- Nurse status boards
- Pharmacy dashboard
- Labor and Delivery status boards
- Sepsis monitoring and early-stage detection

A built-in messaging system allows authorized users to communicate about the information contained in that

Vision Board. This collaboration means many eyes can collaborate virtually to make pertinent decisions about patient care.

Paired with a notification engine provides real-time notification to appropriate staff when hospital-defined criteria on a customized view are met. Notification methods include email, fax, print, text, and page so that immediate action can be taken.

Examples include:

- Notify a physician via page or text when their patient of is transferred to the ICU
- Notify Clinical staff of any newly discovered patient Risk Factors

Key Advantages Include:

- Catches and tracks hospital-acquired conditions in the early stages
- Streamlines clinical staff workflow
- Real-time tracking of labor and deliveries
- Presents real-time data for multiple patients on one screen
- Allows hospital to define custom criteria for each display
- Provides easy navigation to routines and web URLs
- Alerts users with color-coded, important information such as abnormal lab values, next intervention due, and more
- Create part B Medicare Medical Necessity for offsite facilities
